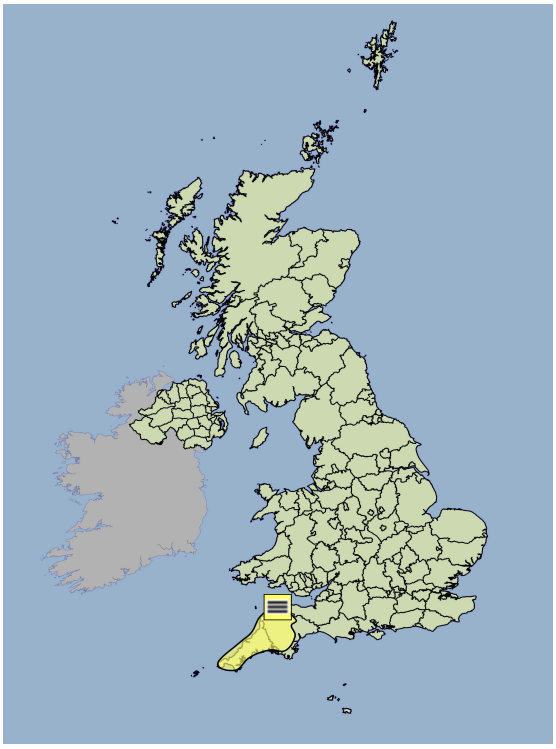
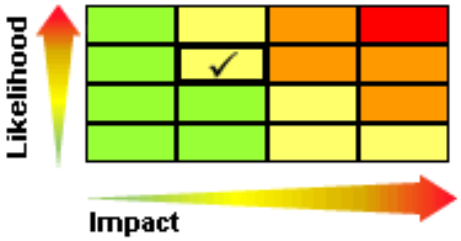
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal system will continue to move slowly eastwards across southwest England through the rest of Wednesday, to become slow moving over eastern parts overnight before returning westwards as a weak feature early Thursday morning.

Clearing skies over Cornwall and west Devon will allow fog to form readily during Wednesday evening, whilst the cloud lowers onto hills further east. The boundary remains uncertain. Later in the night, increasing cloud and breeze will help to clear the fog except on the highest routes.

The Met Office have issued a **Yellow Warning** of **Fog**

Valid from **18:00 on Wed, 19th Nov 2014** until **06:00 on Thu, 20th Nov 2014**

Patches of fog, locally dense, will develop through Wednesday evening across Cornwall and west Devon, whilst cloud will lower to give fog over hills further east, leading to locally poor driving conditions.

Later in the night, increasing cloud and breeze will lift the fog into low cloud with only the highest routes affected by poorer visibility.
